

CONSTRUCTION & PLANT

Lubricant Range

Modern construction and plant lubricants have to meet exacting requirements due to a combination of increased power levels and extended drain intervals coupled with ever more stringent emission analysis. The latest Euro 4, 5 and 6 regulations ensure that all modern equipment complies with agreed emission levels which necessitate the use of filtration systems such as SCR (Selective Catalytic Reduction) and EGR (Exhaust Gas Recirculation) to ensure that emissions are reduced. These systems place further demands and increased performance requirements on lubricants.

The Rock Oil Construction & Plant range of lubricants ensure increased engine component life, reduced oil and fuel consumption and lower particulate emissions throughout the arduous environment. Using the correct lubricant is essential in ensuring the long term reliability and protection of your machinery.
